PROFILE

Backend software engineer experienced in designing high-throughput REST APIs, data processing systems, and relational schemas in Python (FastAPI) and PostgreSQL. Background in asynchronous pipelines and defensive web security (TryHackMe Top 5)

EDUCATION

Bachelor of Engineering, Computer Science & Engineering

Expected 2027

KS Institute of Technology, Bengaluru

CGPA: 8.88 (through Semester 6)

SKILLS

Languages	Python, Java, C, SQL
Fundamentals	Data Structures & Algorithms, OOP, DBMS, OS, Computer Networks
Frameworks & Libraries	FastAPI, SQLAlchemy, Pydantic, React, Next.js
Databases	PostgreSQL, MongoDB
Infrastructure	AWS (EC2, S3, Lambda), Docker, Vercel, Neon, FastAPI Cloud
Development Tools	Linux, Git, Bash, Postman

EXPERIENCE

AI Backend Engineer Intern — *7HiddenLayers*

June 2026 - Present

- Designed incremental ingestion logic for a RAG-based legal document parsing system, so partial document updates re-process only the changed segments instead of the entire knowledge base.
- Built client-facing query infrastructure in which small language models retrieve from a centralized knowledge base, constraining every response to cited source passages to eliminate hallucination.
- Built a multi-agent orchestration pipeline that benchmarks creator posts against organizational SOPs, surfacing actionable revisions before approver review.

PROJECTS

Guardian AI — *FastAPI, PostgreSQL, React, PyTorch, WebSockets*

[GitHub](#)

- Developed a modular platform for detecting online grooming, integrating speech-to-text, transformer-based text classification, LLM-assisted analysis, and real-time alerting.
- Architected an asynchronous, service-oriented backend on FastAPI, PostgreSQL, and WebSockets, coordinating ML inference pipelines and live alert delivery through background task processing.

Brain Tumor Classification System — *Python, TensorFlow/Keras, OpenCV, Flask*

[GitHub](#)

- Engineered an end-to-end MRI classification pipeline featuring OpenCV preprocessing (denoising, CLAHE) and Grad-CAM localization to deliver explainable diagnostic overlays on a Flask web application.
- Achieved a peak test accuracy of **99.21%** on 1,519 evaluation images using DenseNet121 and ResNet50 models, maintaining a low latency of ≈ 51 ms per image.

QuizGenAI — *FastAPI, PostgreSQL, SQLAlchemy, React*

[GitHub](#)

- Built backend services for an AI-powered quiz platform, covering token-based authentication, quiz generation, answer evaluation, and leaderboard management.
- Structured a modular FastAPI codebase around PostgreSQL, SQLAlchemy, and shared API contracts, isolating LLM services behind a dedicated layer for structured content generation.

ACHIEVEMENTS & INTERESTS

- Ranked in the **Top 5% globally** on TryHackMe through Capture the Flag (CTF) challenges, with a focus on web application and authentication security.

- Secured **Second Place** at the **National Level Hire-4-Thon Hackathon (2026)**.
- Interests: Playing guitar, fitness, reading, journaling, and exploring emerging technologies.
